Describe Cause of Problem and Remedial Action Taken. * ☐ XTO had 5- 400 barrel steel frac tanks full of fresh water on location in preparation of frac operations. Upon arriving at the location it was discovered that the valves on all 5 tanks had been opened releasing fresh water. Vandalism was suspected and a report was filed with the sheriffs department. The fresh water ran off location and was frozen in thin sheets of ice. Approximately 84,000 gallons of fresh water was estimated missing.

Describe Area Affected and Cleanup Action Taken * ☐ The release did run off location and froze in thin sheets. Due to the fact that it was fresh water (documentation included) no clean up action was taken. All notifications were made and a report was filed with local law enforcement.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
