### Pit, Closed-Loop System, Below-Grade Tank, or Proposed Alternative Method Permit or Closure Plan Application

Type of action:  Permit of a pit, closed-loop system, below-grade tank, or proposed alternative method  Closure of a pit, closed-loop system, below-grade tank, or proposed alternative method  Modification to an existing permit  Closure plan only submitted for an existing permitted or non-permitted pit, closed-loop system, below-grade tank, or proposed alternative method
Instructions: Please submit one application (Form C-144) per individual pit, closed-loop system, below-grade tank or alternative request
Please be advised that approval of this request does not relieve the operator of liability should operations result in pollution of surface water, ground water or the environment. Nor does approval relieve the operator of its responsibility to comply with any other applicable governmental authority's rules, regulations or ordinances.

### SG Interests I, Ltd.

### Below ground Tank - Closure Plan

### West Bisti 26-13-17 #1

In accordance with Rule 19.15.17.13 NMAC the following information describes the closure requirements of Below Grade Tanks (BGT's) on SG Interests I, Ltd. locations hereinafter known as SGI locations. This is SGI's standard procedure for all BGT's. A separate plan will be submitted for any BGT which does not conform to this plan.

### General Requirements:

- 1. SGI shall close a below-grade tank within the time periods provided in 19.15.17.13 NMAC, or by an earlier date that the division requires because of imminent danger to fresh water, public health or the environment.
- 2. SGI shall close a permitted below-grade tank within 60 days of cessation of the below-grade tank's operation. The closure report will be filed on C-144
- 3. SGI shall remove liquids and sludge from a below-grade tank prior to implementing a closure method and shall dispose of the liquids and sludge in a division-approved facility. The facilities to be used will be Basin Disposal (Permit #NM-01-005) and Envirotech Land Farm (Permit #NM-01-011). Any liner will be disposed of at the San Juan County Landfill located on CR 3100.
- 4. SGI will receive prior approval to remove the below-grade tank and dispose of it in a division-approved facility or recycle, reuse, or reclaim it in a manner that the appropriate division district office approves. Documentation of how the below-grade tank was disposed of or recycled will be provided in the closure report.
- 5. If there is any on-site equipment associated with a below-grade tank, then SGI shall remove the equipment, unless the equipment is required for some other purpose.
- 6. SGI shall test the soils beneath the below-grade tank to determine whether a release has occurred. SGI, thru an approved third party, shall collect, at a minimum, a five point, composite sample; collect individual grab samples from any area that is wet, discolored or showing other evidence of a release; and analyze for BTEX, TPH and chlorides. SGI shall notify the division of the test results on form C-141.

Components	Tests Method	Limit (mg/Kg)
Benzene	EPA SW-846 8021B or 8260B	0.2
BTEX	EPA SW-846 8021B or 8260B	50
TPH	EPA SW-846 418.1	100
Chlorides	EPA 300.1	250

- 7. If the samples exceed the limits above it will be determined that a release has occurred, then SGI shall comply with the applicable spill and release rules as appropriate.
- 8. If the sampling program demonstrates that a release has not occurred or that any release does not exceed the concentrations specified in Paragraph (4) of Subsection E of 19.15.17.13 NMAC, then SGI shall backfill the excavation with compacted, non-waste containing, earthen material; construct a division-prescribed soil cover; re-contour and revegetate the site.
- 9. Notice of Closure will be given prior to closure to the Aztec Division office between 72 hours and one week via email or verbally. The notification of closure will include the following:
  - i. Operator's name
  - ii. Location by Unit Letter, Section, Township, and Range. Well name and API number.
- 10. The surface owner shall be notified of SGI's closing of the below-grade tank prior to closure as per the approved closure plan via certified mail, return receipt requested.
- 11. Re-contouring of location will match fit, shape, line, form and texture of the surrounding. Re-shaping will include drainage control, prevent pooling, and prevent erosion. Natural drainages will be unimpeded and water bars and/or silt traps will be placed in areas, where needed, to prevent erosion on a large scale. Final re-contour shall have a uniform appearance with a smooth surface, fitting the natural landscape.
- 12. SGI shall seed the disturbed areas the first growing season after the operator closes the pit. Seeding will be accomplished via drilling on the contour whenever practical or by other division-approved methods. BLM or Forest Service stipulated seed mixes will used on federal lands. Vegetative cover will equal 70% of the native perennial vegetative cover (un-impacted) consisting of at least three native plant species, including at least one grass, but not including noxious weeds, and maintain that cover through two successive growing seasons. Repeat seeding or planting will be continued until successful vegetative growth occurs.
- 13. A minimum of four feet of cover shall be achieved and the cover shall include one foot of suitable material to establish vegetation at the site, or the background thickness of topsoil, whichever is greater.
- 14. All closure activities will include proper documentation and be available for review upon request and will be submitted to OCD within 60 days of closure of the below-grade tank. Closure report will be filed on C-144 and incorporate the following:
  - Soil Backfilling and Cover Installation
  - Re-vegetation application rates and seeding techniques
  - Photo documentation of the site reclamation
  - Confirmation Sampling Results
  - · Proof of closure notice
- 15. The surface owner is the Navajo Agricultural Products Industry. NAPI will not allow any protruding markers on a reclaimed location so none will be installed. A flat marker will be installed and GPS coordinates recorded.

Hydrogeology Report for the SG Interests I, LTD, Bisti West 26-13-17 #1

The Bisti West 26-13-17 #1 (30-045-29160), located in NENE Sec 17, T26N, R13W San Juan County, is in the upper southwestern reaches of the San Juan River drainage basin. The surface is covered by Quaternary alluvium consisting of unconsolidated sand, gravel, silt, clay, and terrace gravel and boulder deposits. The alluvium itself is not a source for ground water. The consolidated rock outcrops along the drainage are the Tertiary Age Paleocene Nacimiento Formation which underlies the alluvium. The Nacimineto Formation is a stratified fluvial sand and shale sequence less than 200 feet thick.

The aquifer in this area of the San Juan Basin primarily consists of the Ojo Alamo Sandstone. The top of the Ojo Alamo at this drill site is estimated to be approximately 220 feet below the surface. The Ojo Alamo is a permeable conglomerate and medium to very coarse sandstone interlayered with relatively impermeable shale. This aquifer contains fresh to moderately saline water. Dissolved-solids concentrations generally increase along the groundwater flow path from less than 1,000 milligrams per liter near recharge areas to about 4,000 as the formation is deeper into the basin.

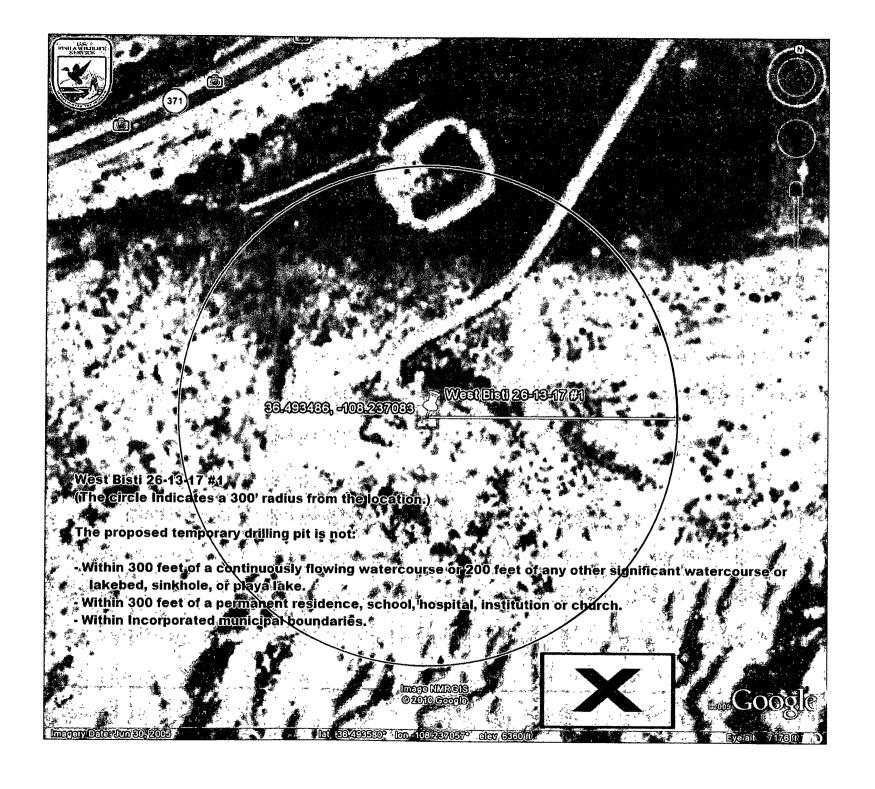

The Bisti West 26-13-17 #1 is located in the NENE quarter-quarter of section Sec 17, T26N, R13W. No groundwater wells were identified using the iWaters Database from the Office of the State Engineers within a 3 mile radius of this well. The following table shows the formation tops for this well.

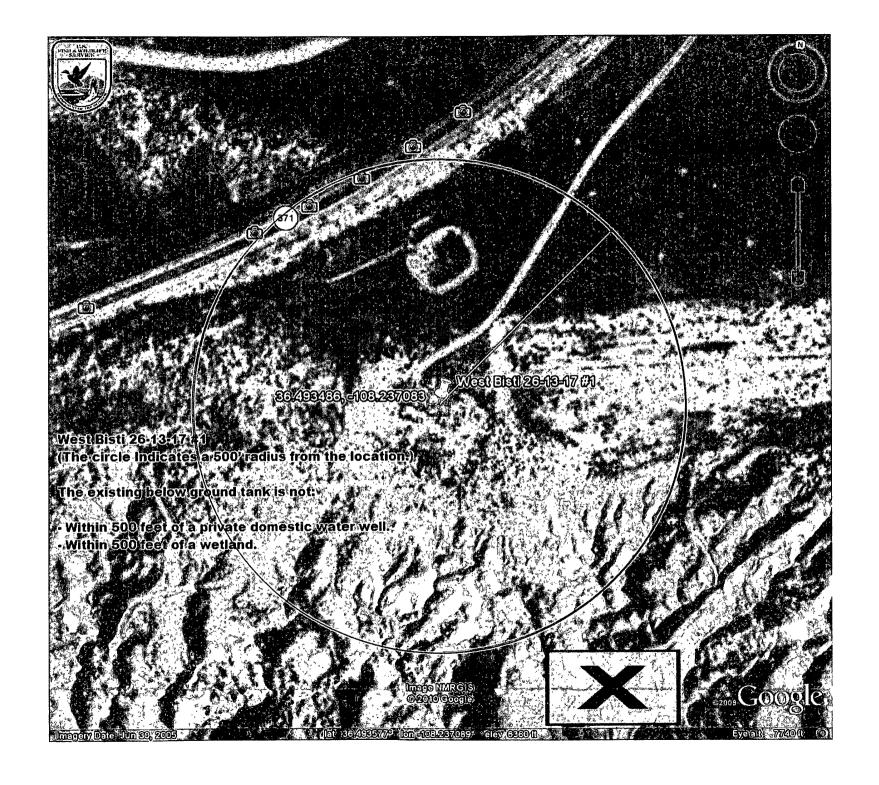

Mairie	Top MD	` 4		tion Pick Basis

### **Wetlands Certification**

RE: West Bisti 26-13-17 #1

I <u>William Schwab III</u> certify that I have visually inspected the above well and that there are no wetlands with in a 500 foot radius.\

There is no data available from the US Fish and Wildlife identification map (attached) as to the existence of a wetland.

# Map of Mining Sites in Area of Interest

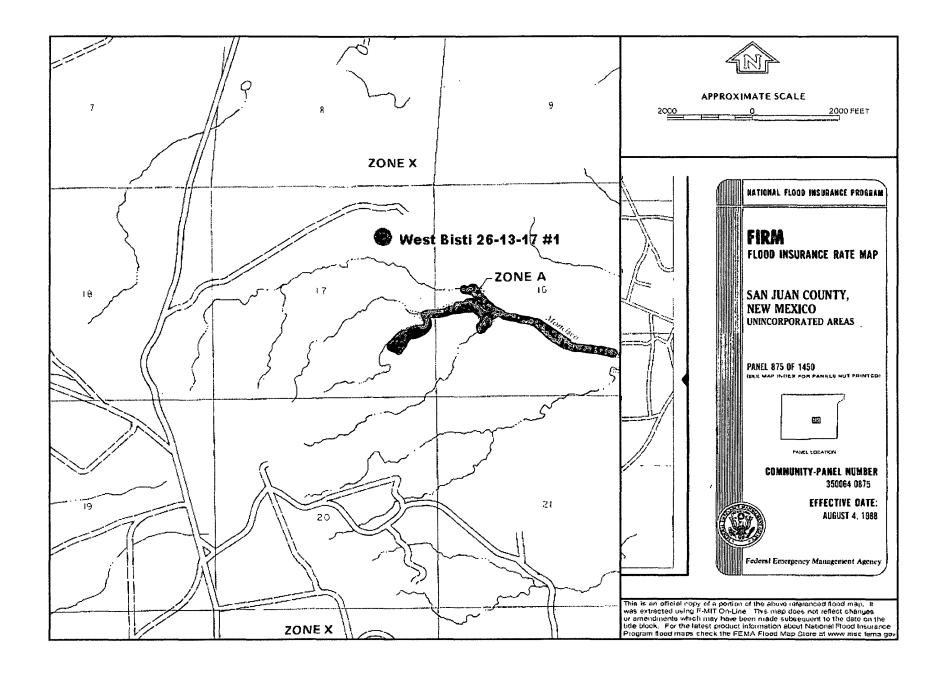

## Map from NM-EMNRD Website

There are no underground mines around or under the existing well site. Location of P&A'd CBM Well.

### **Unstable Area**

RE: West Bisti 26-13-17 #1

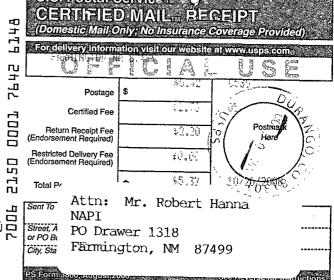

The well pad is not located near any surface mines or over any subsurface mines. The Soil consists of a clay sand mixture. The location is an existing well pad. The existing underground pit tank is located in the cut of the cut side of the location.

Robert Hanna Navajo Agricultural Products Industry PO Drawer 1318 Farmington, NM 87499

RE: West Bisti 26-13-17 #1, API # 30-045-29160

### Robert,

This is a follow up certified letter as per the requirements of the new OCD pit rule 17 requiring notification to the surface owner that we are planning to close an existing below ground pit tank on the subject location. After P&A operations cease, SGI plans to close the below ground pit tank per the approved APD, the new NMOCD rules, and any NAPI BIA regulations that apply.

As per our meeting Wednesday, October 1, 2008 I plan to close the pit per the approved BLM APD. The BLM APD allows us to follow the surface reclamation requests of the surface owner. NAPI guidelines will be followed for the closing and reclamation of the pit and location.

Please let me know if you have any comments or questions.

Thank you for your time.

Attn: Brandon Powell

Dear Mr. Powell:

Reference is made to the following well located in T26N-R13W, San Juan County, New Mexico:

West Bisti 26-13-17 #1, API # 30-04529160

In anticipation of P&A of this well, a "Below Ground Tank Closure Application" was submitted in October of 2008. Due to mitigating circumstances this well was not plugged until February of 2010. Recently it was discovered the BGT Closure Application had not been approved on the NMOCD well file website.

Please accept a re-submitted application for the closure of the BGT on this location. Attached to the original C-144 are updated attachments, replacing the earlier required attachments.

If you have any questions or if I can provide any additional information, please do not hesitate to call me at (970) 259-2701.

Thank you,

Tripp Schwab
