Production Allocation Recommendation Rosa Unit #188C (DK/MC/MV)

 WELLNAME:
 Rosa Unit #188C

 LOCATION:
 Sec.34, T31N,R05W

 API No.:
 30-039-29909

FIELD: Rosa Blanco
COUNTY: Rio Arriba, NM
Date: 8/17/2010

Art.

Current Status: Williams is currently completing the Rosa #188C in the Dakota, Mancos, and Mesa Verde formations. Williams recommends tri-mingling the well after the proposed completion work has been completed.

Commingle Procedure:

- 1. Acidize & fracture stimulate the DK, MC, and MV formations
- 2. Flow back and clean up each formation prior to completion.
- 3. TIH w/ work string and remove CIBP
- 4. Clean out to PBTD
- 5. Complete with single string 2-3/8" tubing, landed in DK perfs
- 6. NDBOP. NUWH.
- 7. Turn well over to production as a tri-mingle

Allocation Method: Williams has assembled historic production data used to forecast Mancos production. Williams used this production data to come up with an initial allocation for this tri-mingle. Williams recommends that a spinner survey be performed after production has stabilized, so that allocation percentages can be corrected if need be.

After 18 months of production:

Total Production from well = 364,108 Mcf Total Production from DK = 86,405 Mcf Total Production from MC = 136,202 Mcf Total Production from MV = 141,500 Mcf

DK allocation = DK prod / Total prod = 86,405 Mcf /364,108 Mcf = **24%** MC allocation = MC prod / Total prod = 136,202 Mcf /364,108 Mcf = **37%** MV allocation = MV prod / Total prod = 141,500 Mcf /364,108 Mcf = **39%**
