Plan to construct 3,333.3 feet of gas and water pipeline extending from the Irish #2 to the Irish Com #90. Once completed, the lines will connect to Dugan's existing Topaz gas and water gathering system (Fig. 1). The gas line will be 4" poly-pipe rated at 160 psi and tested to 150 psi. The maximum operating pressure of the poly-pipe is 100 psi with typical operating pressure of 40 psi. The water line will be 2" fiberglass rated at 500 psi, tested at 300 psi and the operating pressure will be approximately 80 psi. The pipelines will be buried to a depth of 5 feet. The width of the right-of-way will be 30 feet. Gas and water produced from the Irish #2 will be metered at the well head then transported in the proposed pipelines to the centralized gas compression and water collection facility. This modification to the original APD will eliminate the need for 1 compressor, 1 separator and 1 water tank at the Irish #2 location and also the need for a 9-mile off-road trip to haul produced water.
