If a Watercourse was Impacted, Describe Fully.\*

Describe Cause of Problem and Remedial Action Taken.\* **A spill of 80 BBL condensate and 6 BBL produced water was discovered at the San Juan 29-6 Unit #100M on 12/9/05, due to the condensate tank drain valve freezing and breaking. All spilled fluids remained within the bermed area, and a vacuum truck was immediately called to recover the spilled fluids, of which 52 BBL were recovered. Both the sales and drain valves on the condensate tank were replaced with non-freeze type valves.**

Describe Area Affected and Cleanup Action Taken.\* **All spilled fluids remained within the bermed area and 52 BBL were recovered by vacuum truck. A work order has been submitted for remediation, where any stained soils encountered will be excavated and hauled to Envirotech and the excavated area will be backfilled with clean fill dirt.**

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
