Describe Cause of Problem and Remedial Action Taken. (Attach Additional Sheets If Necessary)

The cleanout plate on a rental (Dawn) frac tank leaked several barrels of flowback fluid (mainly produced water). The tank was being used as a flowback tank.

Describe Area Affected and Cleanup Action Taken. (Attach Additional Sheets If Necessary)

The fluid traveled down off location approximately 60 feet. All soils with any indication of hydrocarbons were scooped up with a shovel and put into a 5-gallon bucket. The impacted soils were raked and mixed with native soils. A soil sample was collected by Envirotech: TPH was non detect, chlorides was 528 mg/Kg, and Potassium was 30.5 mg/Kg. These values are well below any level of concern for the environment.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
