None

Describe Cause of Problem and Remedial Action Taken.\*

BR employee arrived on location and discovered that a water truck had backed to the southern edge of BR's location and released produced water off the edge of location. The water flowed down a rock hill slope following natural contours approximately 400 feet. The soil impacted by the produced water was raked and turned with hand equipment to promote natural remediation of the soils. Due to the limited amount of water, the narrow flow path, and the rocky terrain mechanical equipment was not needed.

Describe Area Affected and Cleanup Action Taken.\*

Fluid flowed approx. 400 yards off location following natural contours.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
