Describe Cause of Problem and Remedial Action Taken.*

The drain line for the production storage tank froze and broke. Condensate was released inside the berm containment. The remaining liquid was removed from tank and the valve was replaced. The impacted soils were excavated to the extent practical and confirmed to be below the soil clean up threshold criteria. Approximately 600 cu yds of soil was removed and landfarmed on location. Analytical data is attached for samples collected from walls and bottom of excavation.

Describe Area Affected and Cleanup Action Taken.*

Area within the berm containment boundary was excavated..

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
