U. S. GEOLOGICAL SURVEY  
FARMINGTON, NEW MEXICO

The elevation of the derrick floor above sea level is **6774** ft.

**DETAILS OF WORK**

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is intended to drill to a total depth of 1600' to test Pennsylvanian formations. Casing program will be as follows:

Surface Casing: Minimum of 100'- 10-3/4" w/cement circulated to the surface

Intermediate casing: 8-5/8" to shut off water encountered (will not be run if no water is encountered.)

Production Casing: 5-1/2" to be set to top of the pay zone and cemented with 100 sacks

If commercial production is encountered will run tubing.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
