DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill a hole with rotary tools to an approximate total depth of 4700' in an attempt to gain stratigraphic information about the Gallup sand. 300' of 8-5/8" O.D. casing will be set and cemented to surface. Should any commercial shows of hydrocarbons be encountered, a 4-1/2" oil string will be set. Estimated top of Gallup formation is 4500'.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
