Proposed Program: Re-enter old Gola #2 hole.

Step 1. Pull and remove 8ft. plugged hole marker.

Step 2. Clean out existing 4½in. steel pipe casing.

This hole was drilled by me in 1965. I drilled a 6½ in.dia.hole to a depth of 380 ft. then set 4½ in.casing to a depth of 375 ft. then circulated approximately 33 sacks of cement around the 4½ in.pipe to the surface. No perforating was done at that time.

Step 3. Electric logging from top to bottom of pipe

Step 4. Perforate pipe at appropriate oil zone.

At the time of abandonment in 1966 an 8 ft. dry hole marker was cemented in at the top and it was properly marked GOLA #2

IN ABOVE SPACE DESCRIBE PROPOSED PROGRAM: If proposal is to deepen, give data on present productive zone and proposed new productive zone. If proposal is to drill or deepen directionally, give pertinent data on subsurface locations and measured and true vertical depths. Give blowout preventer program, if any.
