Ballard Pictured Cliffs Rio Arriba County

(Field)

(County or Subdivision)

New Mexico

(State or Territory)

The elevation of the derrick floor above sea level is 6566 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill this well with rotary tools to approximately 2300' to test the Pictured Cliffs formation. Approximately 300' of 8 5/8" surface casing will be set and cemented to the surface. If commercial production is encountered, a string of 4 1/2" production casing will be set and cemented and the well completed.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.

Title Asst. Dist. Superintendent

[illegible]

1. The first of these is the fact that the majority of the population of the United States is now living in urban areas. This is a result of the process of urbanization, which has been going on since the beginning of the 20th century. The population of the United States has increased from about 100 million in 1900 to over 200 million in 1960. At the same time, the population of rural areas has decreased from about 100 million in 1900 to about 50 million in 1960. This has led to a concentration of the population in urban areas, which has had a profound effect on the economy and society.
