**DEC 27 1963**

The elevation of the derrick floor above sea level is **7090** ft.

DETAILS OF WORK

U. S. GEOLOGICAL SURVEY  
ARMINGTON, NEW MEXICO

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

As a result of the above wells declining production to uneconomic rates, we plugged and abandoned it on December 21, 1963 as follows:

1. Spotted 30 sacks plug from 6073 to 5880 and squeezed with 500 psi.
2. Filled 5-1/2" casing with fluid.
3. Spotted 10 sacks plug in 5-1/2" casing from surface to 80'.
4. Filled 9-5/8" - 5-1/2" casing annulus with fluid.
5. Spotted 20 sacks plug in 9-5/8" - 5-1/2" casing annulus surface to 125'.
6. Cut off well head.
7. Erected abandonment marker and cleaned up location.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
