(INDICATE ABOVE BY CHECK MARK NATURE OF REPORT, NOTICE, OR OTHER DATA)

December 30, _____, 19 **59**

Well No. **Jicarilla Apache 28-1** is located **1900** ft. from **[N]** line and **1900** ft. from **[E]** line of sec. **36**

28-1 (Well No.) **28-1** (Twp.) **28-1** (Range) **28-1** (Meridian)
(Undesignated) **Rio Arriba County** **New Mexico**
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is **6937** ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

All measurements are D.T. The well is currently producing approximately 100 BOPD with a GOR of 4300 from perforations at 7394', 7400', 7405', 7415', 7420', 7425', 7435', 7440', 7445', 7450', 7455', 7460', 7465', and 7470' in the Dakota "B" and "J" sands. It is proposed to set a model 24 production packer with a model 2 expendable plug at 7325' to seal off the Dakota formation, and upon completion of a successful shut-off, the well will be perforated in the Gallup formation from 6930' to 6940', and from 6950' to 6960'. The Gallup formation will be tested until a stable producing rate is determined and upon completion of testing, the Gallup, an application will be submitted to daily produce the Gallup and Dakota formations.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
