Figure 1 shows a Western blot analysis of p38 phosphorylation. The blot has two rows of bands. The top row is labeled 'p38' and the bottom row is labeled 'p38<sup>phosphorylated</sup>'. There are four lanes. The first lane is labeled 'Control' and the second is 'LPS'. The third and fourth lanes are labeled 'LPS + 10<sup>-6</sup> M' and 'LPS + 10<sup>-5</sup> M' respectively. The phosphorylated p38 bands are significantly more intense in the LPS and LPS + 10<sup>-5</sup> M lanes compared to the Control and LPS + 10<sup>-6</sup> M lanes.

$$\frac{1}{2} \left( \frac{1}{2} \right)^{n-1} = \frac{1}{2^n} \quad \text{and} \quad \frac{1}{2} \left( \frac{1}{2} \right)^{n-1} = \frac{1}{2^n}$$

Figure 1. The effect of the number of trials on the number of correct responses. The number of correct responses was significantly higher for the 10 trials condition than for the 5 trials condition. Error bars represent the standard error of the mean.

[illegible]

$\frac{1}{2} \leq \frac{1}{2} \leq \frac{1}{2}$
