DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill the subject well to an estimated depth of 7100' to test the Gallup formation. Approximately 300' of 8 5/8" surface casing will be set and cemented to surface. If commercial production is encountered, 5 1/2" casing will be set at approximately 6700' with stage collar at 5200' and cemented with 100 sacks through casing shoe and 160 sacks through stage collar to cover Pictured Cliffs, Mesa Verde, and Mancos formations. A 4 1/2" liner will be hung in 5 1/2" casing from 6600' to 7100'.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
