The elevation of the derrick floor above sea level is **6095** ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Alamogordo Contract 140 No. 12. On January 13, 1959, this well was spotted and on that day 8-5/8" casing was set at 212' with 140 sacks regular cement. After waiting on cement for 24 hours, casing and water shut off were tested with 100 pounds pressure for thirty minutes, which held with no drop in pressure. Reduced hole to 7-7/8" at 212' and resumed drilling operations.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
