DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

On February 26, 1956, this well was perforated with four shots per foot from 3100-3108 feet and two shots per foot 3108-3111 feet. Then it was sand-water flooded with 25,000 gallons water and 30,000 pounds sand. Formation broke at 1000 pounds. Average injection rate 42 BPM. Preliminary test after free 5946 MBPD.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
