

BOLACK-GREER, INC.

CAÑADA OJITOS UNIT 12-11

CORE DESCRIPTION

7220 GA

CORE NO. 1

6660' to 6665.5'

Shale, jet black, carbonaceous, lignitic, sparsely fossiliferous, calcareous, highly fractured.

CORE NO. 2

6665.5' to 6687'

6665.5' - 6673'

Shale, as above, with 1" bed of green bentonite at 6673'

6673 - 6677'

Sandstone, black, fine to coarse grained, poorly sorted, very argillaceous, with black carbonaceous shale matrix. Calcareous, no fractures. Oil stain in matrix.

6677 - 6686'

Shale, black, carbonaceous, calcareous, fossiliferous, very sandy with large floating sand grains. Highly fractured. No matrix oil staining.

6686 - 6687'

Shale, black, carbonaceous, clayey, fossiliferous, fractured. No matrix oil staining.
