If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)\*

On April 15, 1994 a workover unit was rigged up on this well to change out plugged tubing. During this operation pressure testing of the casing identified casing leaks at 3011' and at 320'. A Conoco field representative called Robert Kent in the Albuquerque BLM Office requesting verbal approval to repair these casings leaks. Mr. Kent verbally gave approval to proceed with cement squeezes, to be jointly prepared by Conoco's field representative and a cement service company. A subsequent Sundry will be filed detailing the results of the cementing operations.
