Dear Mr. Davis:

Rio Chama Petroleum acquired the captioned well in January, 2000. We have been reviewing the well files to determine a course of action to restore the well to production. Currently, we plan to set a small compressor at the wellsite to allow the well to overcome the high line pressure and produce some gas.

The longer range plan for this well is to recomplete it into another formation that also requires a 320 acre spacing. That well work may occur as early as December, 2000, but may be postponed until next summer.

We anticipate production to be re-established on the well within the month. Please contact me for any questions.

Yours very truly,

J. Craig Creel  
President
