(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)

Otare Pictured Cliff ext Rio Arriba New Mexico
(Field) (County or Subdivision) (State or Territory)

Ground Level

The elevation of the ~~surface~~ floor above sea level is 6544 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is proposed to drill with rotary tools to a depth of 150+ feet, set 9-5/8" casing to surface with 100 sxx, plus or minus. It is then proposed to drill through the Pictured Cliff formation, run electric log and run 5-1/2" production casing. It is then proposed to gun perforate 5-1/2" casing opposite the Pictured Cliff formation and to stimulate the producing zone with a sandwater frac. The proposed drilling unit is the NE 1/4 of Section 23 (160 acres).

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
