DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

PBTD 5359'. 8-5/8" - 302', 5 1/2" - 5404', 125 sx. Perforations 5320-25, 5329-33.
Gallup Sand.

Production has declined and, as shown by test dated 4-11-59, has passed the economic limit. It is, therefore, proposed to plug well and salvage PL as follows:

1. Squeeze w/cement perforations 5320-25 and 5329-33.
2. Load hole and shoot off pipe above cement.
3. Place 100' cement plug at point where casing is parted.
4. As casing is pulled place cement plug through Pictured Cliff Zone 1640-1815'.
5. Place 100' plug from 252 to 352'.
6. Plug top of surface pipe w/cement and install marker.
7. Restore surface.

Last Production: March, 1959

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
