DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

- PBTD 5311'. 8-5/8" - 290', 5 1/2" - 5351, 135 ex. Perforations: 5057-64, 5073-77, 5107-13, 5123-27, 5150-56, 5179-85, 5191-5210. Gallup Sand.
Production has declined and, as shown by test dated 4-11-59, has passed the economic limit. It is, therefore, proposed to plug well and salvage 5 1/2" casing as follows:
1. Squeeze w/cement perforations 5057-5210.
2. Load hole and shoot off pipe above cement.
3. Place 100' cement plug at point where casing is parted.
4. As casing is pulled place cement plug through Pictured Cliffs Zone 1855'-1680'.
5. Place 100' cement plug 240'-340'.
6. Plug top of surface casing w/cement and install marker.
7. Restore surface.

WELL IS STILL PRODUCING.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
