Federal 7-7
Well No. 6 is located 1900 ft. from N line and 600 ft. from E line of sec.

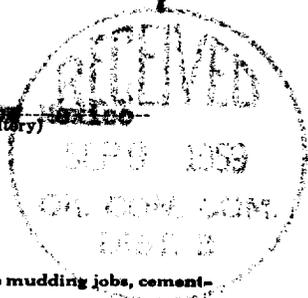

SE/4, NE/4, Sec 7
(1/4 Sec. and Sec. No.) 24 N 2 W BLM
(Twp.) (Range) (Meridian)
Blasi Lower Gallup San Juan New Mexico
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 6815 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Subject well was drilled to a TD of 5500'. 5 1/2" casing was cemented at that point with 300 sacks cement. After WOC 30 hours the pipe was tested okay with 1500 psi for 30 minutes. The hole was then displaced with oil and 500 gallons of acid was spotted on bottom. The casing was perforated with 4 jet shots per foot; intervals were 5410 - 12 and 5430 - 16. The well was then fraced with 20,000 gallons oil and 20,000 lbs sand. The average rate was 36 BPM at 2175 psi. frac sand was cleaned out and the well was then placed on production.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
