

NEW MEXICO  
OIL CONSERVATION COMMISSION  
AZTEC, NEW MEXICO

XXXXXXXXXX

120 East Chaco

Northwest Production Corporation  
520 Simms Building  
Albuquerque, New Mexico

Att: Mr. W. R. Johnston

Dear Mr. Johnston:

We have received copy of the Packer test run on your #-22 "E" well which is a Dual Completion between the Pictured Cliffs and the Mesaverde formations located in the NE $\frac{1}{4}$  Section 33-26N-3W. These tests were conducted on September 13, 1956 and September 20, 1956. The tests conducted on September 13 show that the casing was flowed to the atmosphere through a choke and pressure readings were taken on the tubing over a 3-hour period. At the end of 3 hours there has been a 13-pound drop on the tubing pressure.

The test taken on September 20 was taken with the gas being flowed to the atmosphere through the tubing and the shut-in casing pressure was measured over a 3-hour period. The drop in casing pressure was from 1091 to 998, or 33 pounds. The tests also indicate that the shut-in casing and tubing pressures prior to the test were 1025# on both sides. These tests indicate that there is communication between the tubing and the casing, which is in violation of the Dual Completion Order. We are therefore directing that you take immediate action to separate the two zones.

We are returning herewith Forms C-104 and C-110 filed on this well.

Yours very truly

Emery C. Arnold  
Supervisor, District #3
