☐ Water Shut off
☐ Conversion to Injection

13. Describe Proposed or Completed Operations

The subject well has a suspected casing failure based on bradenhead flow.
It is intended to attempt repair of the production casing and
clean out of the open hole section to return the well to
production.

The failure will be isolated and squeezed as necessary to hold a minimum
of 500 psi.

The open hole will be cleaned out to current PBTD @ 3194'.

An 1 1/4" production tubing string will be set at 3075' per the attached
schematic.
