17. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)

Proposed installation of cathodic protection to well casing:

Procedure: Drill a 6" diameter hole, 300 ft. deep within the existing well location boundary. Six Lida ST-1.60/50 anodes will be installed below the uppermost waterbearing formation, and back filled with coke breeze (99.5% carbon) to completely surround the anodes. Backfill rest of hole with gravel or drilling tailings.

A DC rectifier will be installed on the existing well location and a buried DC positive cable will be connected to the Lida ground bed from the rectifier. Negative DC cables from the rectifier will also be buried and connected to the well casings to be protected. These cables will be buried 18" to 24" deep in the middle of the road as shown on attached map. Therefore, an archaeological study will not be submitted because all work will take place on previously disturbed ground.

Unocal's completion expectation is by July 15, 1990.
