*Re: 1962 deliverability test, Caulkins Oil
Company State "A", D-268, H-16-26N-6W
Basin Dakota Pool*

Dear Sir:

We recently mailed you a list of your wells showing 1962 deliverabilities and you have returned the list to us with the deliverability of the above well shown as corrected from 1082 to 1200 MCF.

The test which we have on file indicates that an error in the deliverability pressure was made on the original test, as 591 PSI was used instead of 791 PSI which is the correct figure. Using this corrected deliverability pressure the deliverability on the well calculates to 1082 MCF. Will you please check your file copy on this test and let us know if you agree that 1082 is the correct deliverability.

Yours very truly

*Emery C. Arnold
Supervisor, District #3*
