Well No. 1 is located 1650 ft. from S line and 1650 ft. from E line of sec. 28  
SE 1/4 Sec. 28 25N 16W T1PM  
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)  
Wildcat San Juan New Mexico  
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is \_\_\_\_\_ ft. Will furnish later

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

The well will be a test of the Cambrian quartzites and will be drilled with rotary tools to an approximate total depth of 11,000'. It is planned to set approximately 1000' of 13-3/8" OD 40% surface casing, which will be cemented to surface. If conditions dictate that an intermediate string of casing is needed, 9-5/8" OD casing will be run. If needed, 7" OD oil string will be set. Weight and grade of both intermediate string and oil string will depend upon the amount needed. All possible producing zones will be adequately tested.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced
