Production was shut off due to entry of mud into casing. We propose to set a retrievable bridge plug at approximately 4000'. We will run a casing corrosion log to determine the area of corrosion. A squeeze retainer will be run and the leak located. Cement will be pumped into the leak to cover the area of bad casing. The cement will be drilled out and the casing tested to 2000 PSI for 30 minutes. The bridge plug will be pulled and the well returned to producing.
