17. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)\*

This marginal well has developed a casing leak and its low production rate does not economically justify a repair. Hence, we request approval to abandon. The following procedure is recommended and we should be ready to start approximately June 15, 1984.

Move on location and rig up. Install Bowen BOP's and kill well if necessary.

Trip in hole with 1 1/4" tubing and spot a 22 sk. cement plug (26 cu. ft.) from 4213' to 3400'. This will cover the Pictured Cliffs perforations, Fruitland, Kirtland and Ojo Alamo formations.

Trip out of hole and lay down the 1 1/4" tubing and WOC 4 hours.

Rig up wireline unit and shoot two squeeze holes at 176'.

Pump 40 sks. of cement (47 cu. ft.) down the 2 7/8" casing and up the 8 5/8" x 2 7/8" annulus to surface, leaving the 2 7/8" casing full of cement.

Cut off surface pipe and casing, cement dry hole marker, and rig down.

18. I hereby certify that the foregoing is true and correct
