NMPM

(Meridian)

Basin Dakota

(Field)

San Juan

(County or Subdivision)

New Mexico

(State or Territory)

The elevation of the derrick floor above sea level is 6100 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work.)

The intention is to plug and abandon the subject well. The well will be plugged and abandoned in the following manner:

1. A 50' cement plug will be set across the Dakota formation (284'-519').
2. A 50' cement plug will be set at the top of the Mesquite formation.
3. If 5 1/2" casing is run below the top of the Mesa Verde formation, a 50' cement plug will be set across the top of the Mesa Verde formation and across the top of the Piedra Blanca formation.
4. If 5 1/2" casing is run off between the Mesa Verde and Piedra Blanca formation, a 50' cement plug will be set at the top of the Mesa Verde formation and a 100' cement plug across the top of the Piedra Blanca formation.

(Continued on Page 2)

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
