Re: Annual Packer Leakage Test and
Deliverability Test, R & G Drilling
#42 Marron, M-22-27N-8W

Gentlemen:

The above well is a gas-gas dual completion in the Mesaverde and Dakota zones. Our records do not reflect that a packer leakage test has been conducted on this well during 1960 as required by Oil Conservation Commission rules.

We also note that annual deliverability tests have not been submitted on either side of this dual. Will you please schedule packer leakage tests within the next 10 days and submit the schedule to this office. The well should also be immediately scheduled for a deliverability test.

Yours very truly

Emery C. Arnold
Supervisor, District #3
