Amoco proposes to drill the above well to further develop the Basin Dakota reservoir. The well will be drilled to the surface casing point using native mud. The well will then be drilled to TD with a low solids nondispersed mud system. Completion design will be based on open hole logs. Copy of all logs will be filed upon completion. Amoco's standard blowout prevention will be employed; see attached drawing for blowout preventer design. Upon completion the well site will be cleaned and the reserve pit filled and leveled. The gas from this well is dedicated to El Paso Natural Gas under REGEIVED contract No. 68,381.

IN ABOVE SPACE DESCRIBE PROPOSED PROGRAM: If proposal is to deepen or plug back, give part on present productive sone and proposed new productive zone. If proposal is to drill or deepen directionally, give pertinent data of substituting the drill or deepen directionally, give pertinent data of substituting the drill or deepen directionally, give pertinent data of substituting the drill or deepen directionally, give pertinent data of substituting the drill or deepen directionally, give pertinent data of substituting the drill or deepen directionally, give pertinent data of substituting the drill or deepen directionally, give pertinent data of substituting the drill or deepen directionally.
