The elevation of the derrick floor above sea level is 5887 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Martin Gas Unit "D" well No. 1 was plugged and abandoned as follows on March 8, 1960 due to well ceasing to produce a measurable volume of gas:

1. Pulled 1-1/4" tubing.
2. Spotted 25 sack cement plug 1707'-1846' and squeezed with 450 psi.
3. Filled hole with fluid.
4. Pumped 45 sacks of cement down 5-1/2"-8-5/8" annulus to anchor pipe.
5. Spotted 5 sacks of cement for surface plug (0-40') and erected dry hole marker.
6. Plug and abandonment by above procedure to permit future re-entry in the event other zones are discovered to be productive in the area.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
