DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

We propose to drill this well with rotary tools to an estimated depth of 1450' to the top of the Dakota formation. Approximately 1450' of 5 1/2" O.D. casing will be run and cemented to surface. We will then drill out from under the 5 1/2" casing with cable tools and complete the well open hole.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations are commenced.
