(Field)

(County or Subdivision)

(State or Territory)

The elevation of the derrick floor above sea level is \_\_\_\_\_ ft. (To be reported later)

## DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill the above well to the Dakota formation at a depth of approximately 6400'. Rotary tools will be used to total depth. Stimulation and completion will be as indicated upon reaching this formation.

The following casing program is proposed:

<u>SIZE</u>	<u>DEPTH</u>	<u>CEMENT</u>	<u>REMARKS</u>
8-5/8"	500'	—	Heat circulate to surface.
5-1/2"	6400'	—	150% theoretical amount cement to bring top of cement on 5-1/2" production string about 300' above top of Gallup.

Copies of location plat are attached. A copy of any survey taken will be submitted upon completion of well.

**I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.**
