The elevation of the derrick floor above sea level is 5856 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

The above well was perforated at 5690-5694, 5700-5704 with 6 shots per foot. These perforations were fracked with 31,000 gallons oil containing 50 pounds Adomite Mark II and 5 gallons PB-1 per 1000 gallons and 20,000 pounds sand. Pressures were: Breakdown 2150, Maximum 2600, Minimum 2500, Average 2550. Average injection rate 27.4 barrels per minute.

Landed tubing at 5713'. Preliminary Potential test 243 barrels per day.

Completed June 7, 1962 as flowing Undesignated Gallup Oil Well.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
