

SURFACE USE AND OPERATIONS PLAN

SCHLOSSER WN FEDERAL #4E

10. RESTORATION OF SURFACE: Other than the area needed for operation and production facilities the site will be contoured as near as possible to its original state. Reseeding or any other restoration will be as specified by the Bureau of Indian Affairs and the United States Geological Survey. Any stockpiled topsoil will be distributed over the disturbed area for final grading and reseeded.

11. OTHER INFORMATION: Vegetation on this location consists of salt sage and various small bushes and a few cedar and Pinon on the westside. Vegetation on the roadway consists of Pinon and Cedar, sage brush and native grasses.

Drainage is to the north into Kutz Canyon and on to the San Juan River.

This location will require a 25' cut on the south side and a 15' fill on the west side.

The rig laydown and V door will be to the south with the pit on the east side.

The nearest dwellings are at the Thriftway Refinery and south of Bloomfield, New Mexico, about 4-1/2 miles north.

To the best of our knowledge there are no domestic water wells in the area.

To our knowledge there are no archaeological, cultural, or historical sites in the area which will be involved. However, an archaeological survey will be made and the report submitted as soon as it is received.

With the short period of operation and the restoration of the surface, any disturbance to vegetation and wildlife will be temporary and minimal. It is not anticipated that there will be any substantial impact on the environment.

12. LESSEE'S OR OPERATOR'S REPRESENTATIVE:

W. A. Walther, Jr.
