17. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

Energy Reserves Group, Inc., as operator of the subject well, proposes to squeeze the 7" surface casing - 4-1/2" production annulus w/75 sx 50-50 Pozmix cement to cover the Ojo Alamo w/cement. (According to R. Tucker Attebery, consulting geologist, the Ojo Alamo lie from the bottom of the surface casing to 136'. The top of the cement is at $\pm 650'$. The above cement should yield sufficient volume to bring cement from the present top back to surface).

Subsurface Safety Valve: Manu. and Type _____
