13. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)

The subject well was completed as a DK well in 12/63. Plans are now to add perfs & stimulate the Pt. Lookout, Menefee, Cliff House and Lewis Shale intervals within the MV formation. Flow test the MV interval and once the pressure stabilizes, PPCo plans on commingling production from DK & MV intervals per DHC Order No. R-11187. The individual well commingling application will be filed and approval received before actual commingle occurs. Brief details we will be using to complete the mentioned work are as follows:

MIRU. COOH w/tubing. Cleanout to PBTD. RIH w/CIBP & isolate DK interval from MV zones. If records or logs indicate no cement across the zones of interest, it may be necessary to shoot squeeze holes in casing and pump sufficient volumes of cement to cover and isolate those intervals. Perf and stimulate the Pt. Lookout, Menefee, Cliff House & Lewis Shale. Flow back until cleaned out to CIBP. RIH w/tubing and land. Place well on Mesaverde production only for approximately 6 months or until pressures stabilize. Once pressure stabilizes. Pull tubing and then drill out CIBP between the DK & MV intervals and cleanout to PBTD. Rerun tubing and then commingle production from both zones if DHC application approved.
