(NOTE: Report results of multiple completion on Well Completion or Recompletion Report and Log form.) -

This well is currently non-productive due to water influx from the middle and lower Dakota perforations. It is planned to restore production by setting a bridge plug at 8120'. This action should allow the well to produce from the upper perforations (8088-8100'). This work should be completed by August 1, 1989.
