Clegg

In accordance with the Conservation Commission Order No. 420, dated April 1, 1958, made for acreage located approximately 10 miles southeast of the town of Estancia, in Section 25, Township 44, Range 10, San Miguel County, New Mexico. This acreage contains 160.24 contiguous surface acres of land owned by Delhi-Taylor Petroleum Co., Inc., Dallas, Texas. This acreage is a legal one-quarter section unit, as shown on the map and survey. The production unit is the well number 1428, a quarter of the Section 25 referred to above.

This well is a deep completion well and is granted under Administration Order No. 420. Said Order No. 420, dated April 1, 1958, grants authority to the New Mexico Office of the Conservation Commission to issue a standard operation unit.

Respectfully yours,

DELHI-TAYLOR OIL CORPORATION

George Clegg

1. The first step in the process of determining the best way to approach a problem is to define the problem. This involves identifying the key issues, constraints, and goals. It is important to have a clear understanding of what needs to be accomplished and what factors may impact the outcome.

2. Once the problem has been defined, the next step is to generate potential solutions. This can be done through brainstorming sessions, research, or consultation with experts. It is important to consider a variety of options and evaluate them based on their feasibility, cost, and potential impact.

3. After generating potential solutions, the next step is to evaluate them. This involves assessing each option against the defined goals and constraints. It is important to consider both the short-term and long-term implications of each solution.

4. Once the best solution has been identified, the final step is to implement it. This involves developing a plan of action, assigning responsibilities, and monitoring progress. It is important to have a clear communication plan and to be prepared to make adjustments as needed.

5. Finally, the last step is to evaluate the outcome. This involves assessing whether the solution met the original goals and objectives. It is important to learn from the experience and use it to inform future decision-making processes.

Non-Standard Production Unit
Laramie-Pintoard Unit Pool,
San Juan County, New Mexico

Gentlemen:

In accordance with Oil Conservation Commission Order No. A-565 Rule 6 (B), application is hereby made for administrative approval of a non-standard production unit whereby 152.56 contiguous surface acres will be allocated to the Delhi-Taylor Pintoard #A-C well in N, Section 53, T 29 N, R 9 W, San Juan County, New Mexico. This acreage is substantially in the form of a rectangle and is a legal one-quarter section subdivision of the U.S. Public Land Survey. The production unit for this well consists of the southwest quarter of the Section 53 referenced above.

This well is a dual completion with administrative approval having already been granted under Administrative Order DC-295. Administrative Order EWU-156 already granted authority to operate the Minardis phase of this well on a non-standard production unit.

Respectfully submitted,

DELHI-TAYLOR OIL CORPORATION
