DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Spudded 12-24-63. Ran 13' of 9 1/8" casing and cemented to surface with 16 sacks cement. Drilled sand, shale, bentonite, limestone, and conglomerate to TD 940'. Reentered top of Dakota sand at 802'. Ran Green Ray neutron log from TD to surface. No show of oil or gas in bailing test. The well was temporarily abandoned by filling the hole with mud and welding a cap on top of the surface pipe. This well may be used in the future as a water injection well. If not, cement plugs will be set and the well abandoned in accordance with state law.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
