Amoco Production Company plans to inject natural gas into the Jenkins Com No. 1 to restore the well to production. This process will occur from September 7 to September 9, 1999. The natural gas will be delivered from the El Paso gas gathering system, measured, compressed and then injected into the well to remove a suspected water block. We anticipate using a total of 600 - 900 MCF during this procedure. A modified Form C-126 will be submitted following injection and recovery of the natural gas.

Legals regarding this well include the following:

Well Name:	Jenkins Com No. 1
Location:	Sec. 15L - T29N - R12W San Juan County, New Mexico
Pool:	Fulcher Kutz Pictured Cliffs
Transporter:	El Paso Natural Gas Company

If you have any questions regarding this procedure, please contact either Gary Munson at 326-9443 or James Walker at 326-9232.
