13. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

Devon Energy requested and was granted verbal approval to sidetrack and re-drill the open hole Fruitland Coal interval on 7/06/00. A 7" drillable bridge plug was set at 2998.5' (7" casing shoe at 3019' KB), pressure tested 7" casing to 1000 psig. The directional survey before setting whipstock indicated the 7" casing was at a 7 degree inclination. The whipstock tool was set at 2982' and kickoff direction was orientated to the south. The window was cut on low side of the 7" casing. Milled out 11' window from 2982.5' to 2993.5'. Deviation surveys taken at 2985' top of whipstock in 7" casing, inclination of 6-1/4 degrees, survey taken at new TD of 3205', inclination of 4-1/2 degrees. The new side track TD has a more vertical open hole compared the old open hole section. Therefore the new TD is 4' shallower than the old TD at 3209'. The 5-1/2" uncemented, pre-perforated liner was installed. Top of liner hanger at 2921'. Bottom of liner bit shoe at 3205'. 2-3/8", 4.7#, J-55 tubing set at 3191'. This well is equipped with 3/4" rods and a top hold down insert pump. Ran 21 guide rods (500') with paddle molds, 8 paddles per rod.

14. I hereby certify that the foregoing is true and correct.
