NOTICE OF INTENTION TO ABANDON WELL			

(INDICATE ABOVE BY CHECK MARK NATURE OF REPORT, NOTICE, OR OTHER DATA)

Farmington, New Mexico, June 5, 19 56

Well No. 1 is located 990 ft. from N line and 990 ft. from E line of sec. 34  
NE/4 of Section 34 T-30-N R-9-W NMPM  
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)  
Blanco-Mesaverde San Juan New Mexico  
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 5743 ft.

**DETAILS OF WORK**

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is proposed to repair the above well as follows:

1. Move in and rig up rotary rig.
2. Pull tubing and clean out to total depth with gas. If tubing cannot be recovered, run free point indicator, cut off tubing above stuck point, pull tubing with drill pipe and jars and, if unable to recover fish, drill new side-tracked hole.
3. Run 5" liner from total depth to tie-in to 7" casing.
4. Cement casing with volume sufficient for 100-150' tie-in to production casing.
5. Run temperature survey to determine top of cement.
6. Drill plug and clean out to total depth with water.
7. Perforate opposite Point Lookout and Cliffhouse and well developed sands in the Menafee using two shots per foot.
8. Test Natural. Stimulation will be contingent on results of natural tests.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
