DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to:

1. Pull tubing. Run casing inspection tool in 7" OD. casing to locate hole in casing.
2. Squeeze casing leak w/necessary amount of cement to shut off casing leak.
3. Clean out to T.D. of 5372', and run approximately 807' of 4 1/2" OD., 9.50#, J-55 Casing as a liner (Top 4765', Bottom 5372') and cement w/100 sacks.
4. Pressure test casing and liner to 2000# psi.
5. Perforate and frac Point Lookout and Cliff House in an effort to stimulate production.
6. Re-run tubing and place well back on production.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
