Mesa Verde Wildcat
(Field)

San Juan
(County or Subdivision)

New Mexico
(State or Territory)

The elevation of the derrick floor above sea level is 6542 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

This well will be plugged and abandoned as follows; due to non-commercial production:

On June 21, 1953, Phillips Petroleum Company set a Halliburton Cement Iron Bridge Plug at 3000' with a 60' Calced plug on top to seal off the Mesa Verde formation which was shot from 2-5144 w/nitro.

1. Spot a 20 sk. cement plug across perforations (3140-3040')
2. Determine 7" casing free point and cut casing.
3. Spot 25 sk. cement plug across cut.
4. Pull 7" casing.
5. Spot a 15 sk. cement plug across bottom of 10 3/4" surface casing.
6. Spot a 10 sk. cement plug @ surface with a permanent 4' x 4" dry hole marker.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
